End Term · PitchPrep, Pre-Meeting Investor Brief: Components Map

Name + firm in, a sourced and verified brief out; then notes, follow-up, practice, investor discovery and a round tracker. All AI is Gemini Flash. Code, not the model, decides what is shown.

Actor	Trigger	Input	Context	Processing	AI	Output
Priya (Founder · human)	Investor meeting booked: she enters name + firm, or her calendar surfaces it	Name + firm. Optional: meeting time, a post she pastes	Saved startup profile: stage, sector, raise, traction			Brief in about a minute: deals, thesis, watch-outs, 3 talking points
PitchPrep app (Next.js on Vercel)	Every 30 min: calendar scan, brief preparation, and any due email nudges		Checks 6-hour cache and rate limits, loads profile, opens a job	Runs 5 searches in parallel under a 2-minute deadline; streams progress		
Live data layer (Google Search + page fetch)			Rules: robots.txt, no private addresses, no LinkedIn scraping. Also feeds investor search	Resolves each citation, opens the article, reads its date and text		
AI model (Gemini Flash)					Searches, extracts, fact-checks, writes talking points then re-checks them; spots investor meetings; finds investors	
Verification gate (Code, not the LLM)				Quote in source; deal dated in window (90 days; 200 for investor search); speaker named; dedupe		Unverified claims dropped and listed as "left out and why"
Database (Supabase)			Briefs, claims, sources, notes, raise plan, mock rounds, searches; private per workspace	Logs status, time, tokens and cost for every brief		
Delivery (Web · PDF · meeting card)				Formats for reading, PDF, phone meeting card; sends nudges to her from a Gmail sender		Email to her (confirmed address only): brief ready, refreshed brief, follow-up, gentle bump, Monday summary
After the meeting (Notes · follow-up · practice)	Meeting done: she adds notes, or practises an answer	Her notes, and the answer she typed or dictated	Her startup profile and the verified claims only	Code checks every figure against her profile; flags placeholders	Drafts the follow-up; coaches the answer	A draft she edits and sends herself; status and next step saved
Raise tools (Discover · Raise · Deck · Practice)	She asks "Who should I pitch?", opens her round, or starts a mock meeting	Her profile and focus; her pitch deck (PDF or text); her own contacts file, kept in the browser	Live search of recent rounds, peers and funds; her pipeline; a verified brief	Code verifies each deal, checks deck figures against her profile, matches contacts, does the round maths	Finds investors, reads the deck, plays the investor from verified facts, writes the pre-mortem, scores answers	Investors by round; deck report; warm paths; pre-mortem; round progress; scorecard and trend
Dashboard (Vercel)				Aggregates KPIs from Supabase		Live dashboard: time to brief, verification rate, cost per brief

HUMAN BOUNDARY

AI can research, cite, summarise and draft angles. It does not contact investors, send anything on her behalf to anyone but herself, state anything it cannot quote from a source, scrape LinkedIn, judge people or predict funding decisions.
Which angle to use, whether to take the meeting, and what to send afterwards, stays with Priya.
