End Term · PitchPrep, Pre-Meeting Investor Brief: Components Map

Name + firm in, a sourced and verified brief out, then notes, follow-up and practice. All AI is Gemini Flash. Code, not the model, decides what is shown.

Actor	Trigger	Input	Context	Processing	AI	Output
Priya (Founder · human)	Investor meeting booked: she enters name + firm, or her calendar surfaces it	Name + firm. Optional: meeting time, a post she pastes	Saved startup profile: stage, sector, raise, traction			Brief in about a minute: deals, thesis, watch-outs, 3 talking points
PitchPrep app (Next.js on Vercel)	Every 30 min: calendar link scan finds investor meetings due within 24 hours		Checks 6-hour cache and rate limits, loads profile, opens a job	Runs 5 searches in parallel under a 2-minute deadline; streams progress		
Live data layer (Google Search + page fetch)			Rules: robots.txt, no private addresses, no LinkedIn scraping	Resolves each citation, opens the article, reads its date and text		
AI model (Gemini Flash)					Searches, extracts, fact-checks, writes talking points then re-checks them; spots investor meetings	
Verification gate (Code, not the LLM)				Quote in source; deal dated in last 90 days; speaker named; dedupe		Unverified claims dropped and listed as "left out and why"
Database (Supabase)			Briefs, claims, sources, cost and feedback; private per workspace	Logs status, time, tokens and cost for every brief		
Delivery (Web · PDF · meeting card)				Formats for skim reading; PDF; share link; phone meeting card		
After the meeting (Notes · follow-up · practice)	Meeting done: she adds notes, or practises an answer	Her notes, and the answer she typed or dictated	Her startup profile and the verified claims only	Code checks every figure against her profile; flags placeholders	Drafts the follow-up; coaches the answer	A draft she edits and sends herself; status and next step saved
Dashboard (Vercel)				Aggregates KPIs from Supabase		Live dashboard: time to brief, verification rate, cost per brief

HUMAN BOUNDARY

AI can research, cite, summarise and draft angles. It does not contact investors, send any email, state anything it cannot quote from a source, scrape LinkedIn, judge people or predict funding decisions. Which angle to use, whether to take the meeting, and what to send afterwards, stays with Priya.
